Activity panels are essential on the playground. They provide elements that engage the minds of children. The Freestanding Tumble Ball Panel is one of those panels! Children can experience how gears move and work with this panel. Simply turn the wheel and the gears will work together to move. In the two largest gears are small balls that move as the gears move, illustrating how the gears move in different directions. The Freestanding Tumble Ball Panel is designed to be enjoyed by children ages 2-12 years old.
