A great way to attract more visitors to your business or property is to make it accessible to cyclists. With the 5-Hoop U-Lockit Bike Rack, you can provide parking for up to ten bikes at once. In addition to its impressive capacity, this bike rack model also boasts a design that removes the dangerous vertical bars commonly referred to as "wheel-benders," which are found on improperly made bike racks and can cause severe damage to bikes. Instead, it uses large hoops, which give each bike two points of contact so there are plenty of secure places to lock it to. The shape of the hoops also allows the use of U-locks, which do not fit many styles of bike racks.

This heavy-duty steel bike rack, which is manufactured in the USA, can be ordered with the bare galvanized finish or with a layer of powder-coat paint in every color of the rainbow, from deep red to dark purple, bronze, white, or black. The weight of the bike rack is 115 pounds, and its dimensions are 72 inches in length, 42 inches in width, and 31 inches in height. The bike rack can be permanently mounted on various surfaces, such as grass, concrete, or a deck; surface mounting hardware is included.

For smaller racks in this same style, take a look at the 3-Hoop U-Lockit Bike Rack With 6-Bike Capacity and the 4-Hoop U-Lockit Bike Rack With 8-Bike Capacity.
