

## Eiffel Tower Recycled Plastic Play System

**Price \$33,633.00**

### Highlights:

- Features a Spiraling slide
- Adds recycled plastic in its construction
- Compact yet full of fun play structures
- Recycled Structural Plastic parts are free of BPA, phthalate, and PVC

**Age Group:** 5 to 12 years

**Capacity:** 42 - 60 children

**Use Zone:** 33' x 31'

Kids will find an architectural wonder to call their own with the Play Mart's Eiffel Tower Recycled Plastic Play System. This compact structure features a hexagonal deck, creating six sides of fun. Start off by going up the ADA Triple Stepper to reach the platform. Kids watch the mechanics of the Metal Gear Panel and then climb up to the second platform. There, children can glide down the 6-foot Open Spiral Slide. Several climbers decorate the unit, offering direct access to the upper decks. A Bouldering Wall extrudes from the side to create a safe climbing alternative to the Timber Wall Climber. A roof covers the hexagonal deck, protecting children from the sun's UV rays, keeping them cool, and helping them see what is around them more clearly. Built with future generations in mind, Play Mart constructed parts of the Eiffel Tower Recycled Plastic Play System using recycled high-density polyethylene. It is 100% free of harmful chemicals such as BPA, Phthalate, and PVC. It also boasts EcoColor Plastic components that will stay bright due to its UV protected construction.
