Age Group: 2 to 12 years

Capacity: 34 - 51 children

Unit Size: 26' x 34'

The Beaver Recycled Plastic Playsystem by Play Mart is a charming smaller unit that will add a lot of fun to a daycare facility, elementary school, or parks ground. Named after the industrious beaver, this activity playscape features an exciting decoration of that same animal by way of a beautiful photography panel built into the walls of the product. And just like that critter, kids will also be busy once they see all the cool stuff they get to build their time around on this playground. Youth can clamber up to the higher deck by way of robust physical challenge obstacles like the Rock Wall Climber or the metal looping rungs of the Tree Climber. Others can opt to take a more easy-going trip to the top by starting at the ADA Transfer Triple Stepper. Any way you get there, there is a sweet Double Slide and a Chute Slide to pick between swooshing to the ground on.
