**Age Group:** 2 to 5 years

**Assembled Dimensions:** 242" x 64" x 120"

**Capacity:** 15 - 20 children

**Use Zone:** 32' x 18'

The Beach Boat Recycled Plastic Play System by Nature of Earl Play is an excellent playground structure for kids aged 2 to 5. This commercial-grade unit would be an ideal addition to any interior or exterior locations that see regular visits from families with small children. Daycare facilities, mall recreation zones, and churches would all be enhanced by the fun collection of activities this product introduces into a playspace. A modestly-sized Rock Wall Climber can be ascended by little hands and feet making use of the knobby grips. Once atop the upper platforming, kiddos can imagine they're having high seas adventure by piloting a pretend ship with a turnable steering wheel while their crewmates scan the ocean for danger using the two attached teleidoscopes. A bouncy Wave Slide is one of two slides attached to the structure which is a great feature for a unit with a smaller footprint. The Beach Boat Play System makes heavy use of recycled structural plastic in its construction so you can feel good knowing that your purchase helped prevent plastic waste from ending up on actual beaches.
